"New Generation" Asset Management/Maintenance Management

Senergy technology

The result of more than 20 years of research and development, **Senergy EAM/CMMS** is software designed for Internet use and is currently the most user-friendly, most advanced solution for Computerized Asset Management/Maintenance Management.

Built on the basis of **Oracle™** technology, **Senergy** has developed an innovative Technological Core that provides unmatched, state-of-the-art performance in managing and accessing information. The proprietary technologies, "One Screen – One Program" and "Double-Click Navigation", are both the result of the Modular type architecture created by our R&D team.

Tangibles results in a matter of weeks following implementation

- Increase productivity of maintenance personnel,
- Reduce overtime,
- Reduce inventory costs,
- Reduce service calls,
- Reduce equipment energy costs,
- Obtain discounts on parts purchases,
- Increase residual value of equipment,
- Decrease number of unplanned stoppages,

Increase reliability and availability of equipment,

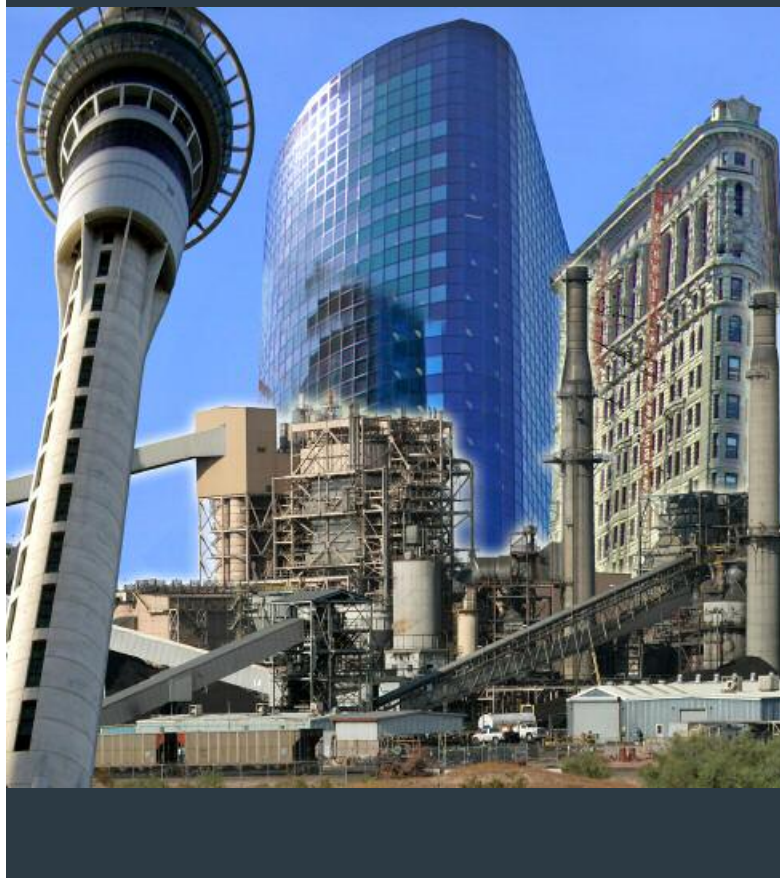

- Improve production planning.

The Senergy EAM/CMMS product

A powerful, user-friendly and highly configurable solution meeting the performance needs of today.

Senergy

- Automates and controls all operations of the maintenance process,
- Meets all needs in conditional, corrective and preventive maintenance,
- Handles all levels of maintenance management,
- Meets requirements of applicable standards (ISO, HACCP, PEP, etc.),
- Identifies equipment and items using photos,
- Accesses information by navigation in drawings,
- Traces information through an unlimited hierarchy of components,
- Integrates bar code technology,
- Manages GL accounts and real-time tracking of expenditures,
- Triggers the opening of external applications (Word, Excel, Autocad, etc.) connected with recorded data,
- Updates and presents the maintenance activity dashboard,
- Updates all statistical information on inventories in real time,
- Manages multiple stores simultaneously,
- Provides all information necessary for pricing negotiations with suppliers,
- Manages the history of all client service calls and lets clients track the progress of their requests in real time on the Internet.

The various categories of Senergy EAM/CMMS users

Senergy can be used by all persons involved in a company's productive process

Maintenance personnel

Maintenance planning, management of work orders, database input, maintenance procedures, etc.,

Analysts

Compiling of information, analysis and adjustment of indicators,

Decision makers

Analysis of indicators, adjustment of production variables, decisional information, etc.

Services provided by our network of Integrator Partners and/or VARs

Our Authorized Partners have all been given advanced technical and commercial training and have been certified in all competencies required for the correct implementation of our Senergy EAM/CMMS product.

For example, the implementation process, training and technical support are carried out according to the following structured methodology:

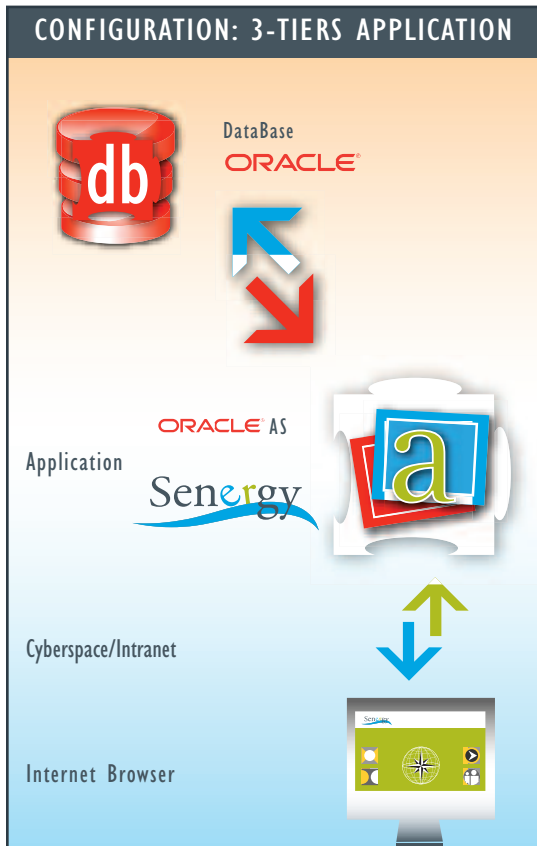

Implementation processes

- › Analysis and evaluation of existing maintenance and inventory processes,
- › Evaluation of resources and procedures necessary for re-engineering of maintenance,
- › Project management and planning,
- › Analysis, collection, import, and input of data,
- › Tests and validation of data integrity,
- › Installation of CMMS tools,
- › Custom development (for example: transfers of existing data from competitor's product),
- › Developments of interface (ERP, etc.),
- › Integration and configuration.

Training and technical support

- › Simple, short, and effective training sessions,
- › Specific training for each type of user,
- › Full-time availability of trainer during the implementation period,
- › Planning of training according to the company's priorities,
- › Specific user manuals for each module,
- › Close collaboration between the trainer and the maintenance supervisor,
- › Technical support plan,
- › Telephone support plan,
- › Internet online support,
- › Troubleshooting.

Senergy EAM/CMMS offers the most advanced performance and most user-friendly management solution based on Oracle SQL™ ever offered. Accessible from Windows, Unix, Mac OS or Novell Network, Senergy EAM/CMMS is a rapidly productive solution that will make it possible for your company, whatever its size, to plan and develop its long-term strategy of Physical Asset Management and associated Maintenance.
